

Getting back to work in a safe and compliant workspace

Ensuring a clean, safe, and compliant workplace is a critical component of opening for business after a pandemic. But where do you start?

Step 1: Ensure clean practices by staff

-  Create and communicate new protocols
-  Follow guidelines from the CDC, OSHA, EU-OSHA and other health agencies, as well as industry-specific requirements
-  Be audit-ready:
 - Track compliance with automated maintenance checklists and workflows
 - Monitor staff skill sets, training, and qualifications and digitize manager signoffs

Step 2: Update preventive maintenance schedules

-  Increase frequency of cleaning and maintenance of critical/high-touch equipment
-  Specify and provide required personal protective equipment (PPE), disinfectant, and other safety materials
-  Document your health and safety practices

Step 3: Identify assets at risk

-  Determine which assets have the greatest impact on safe and efficient operations
-  Perform a risk assessment and assign a reliability score
-  Prioritize the maintenance of critical assets to mitigate contamination or health hazards

Step 4: Prepare for changing expectations

-  Manage frequent updates to environmental, health, and safety regulations
-  Enable 100% compliance as the requirement, not the goal
-  Ensure the availability of real-time data about adherence, training, certifications, and hazardous material handling

Step 5: Move from preventive to prescriptive maintenance

-  Adapt quickly to rapidly changing requirements
-  Integrate across facilities and the supply chain to ensure organization-wide compliance
-  Incorporate historical elements: failure analysis, repair codes, warranty definitions, and original equipment manufacturer (OEM) expectations
